Project Manager  
Calgary, Alberta

THE ROLE
The Project Manager holds a senior role within Dynamic Risk and is responsible for leading project implementation for our clients. Our Project Managers are empowered to act with integrity at all times and they are responsible to ensure both internal and external team members are focused on delivering our client’s projects on time and on budget.

Our ideal candidate has highly developed leadership skills, enjoys working in an environment where all team members are encouraged to identify solutions, is highly flexible and able to quickly adapt to changing priorities.

Our top performers possess superior communication, time management and organizational skills. They demonstrate accountability for ensuring our client’s needs are aligned with Dynamic Risk’s standard services, are scoped and managed accurately and are delivered with excellence. They successfully lead a number of projects at any given time varying in size and scope and have a natural ability to earn the trust and respect of others.

WHY JOIN US?
Dynamic Risk is committed to creating extraordinary value for our clients through technology and people. Our values define what we stand for and believe as a company, and our employees will tell you they are lived every day.

As a member of the Dynamic Risk team you’ll work in a collaborative environment where individual contribution and leadership is encouraged, going above and beyond is recognized and rewarded, where technical challenges are inspiring and valued, and where you’ll have direct influence on the Company’s direction and success.

WHAT YOU’LL GET TO DO AS A PROJECT MANAGER
• Oversee the entire project lifecycle, including business development, project needs assessment, project design through to project execution and delivery
• Develop, clarify and manage the scope of the project, defining project deliverables and achieving targeted outcomes
• Identify and manage overall project dependencies and ensure project deliverables stay on-time, on-target, and on-budget through the management of project metrics
• On a timely basis, identify all project barriers, and the strategies and approaches to overcome those barriers
• Interface and work closely with Software Development, Engineering, Quality Assurance and the GIS team
• Provide verbal and written project status updates and reports
• By example, establish and maintain a work environment conducive to positive morale, integrity, creativity, and a team-oriented workplace
• Lead and participate in project meetings and conference calls

WHAT YOU’LL NEED TO BE SUCCESSFUL
• Undergraduate degree in Computer Science, Engineering (BSc/BA) or related field
• A technical certificate (CET) or a technical continuing education program CAPM or PMP is considered an asset
• A minimum of ten years of experience leading projects and working with or within technology consulting firms
• Solid working knowledge of pipeline operations and regulation, integrity and risk management processes and practices and industry standards an asset
• Excellent time and project management skills and demonstrated efficiency in scoping and executing multiple concurrent projects valued, on average at over $250,000
• Possesses superior communication skills ensuring that our client’s needs are aligned with Dynamic Risk’s standard services, are scoped and managed accurately and are delivered with excellence
• Understand customer business requirements at detailed level
• Ability to plan, schedule, track and monitor project progress – knowledge of MS Project and Professional Services Automation (PSA) tools would be an asset
• Proven track record of successfully managing client relationships, and identifying opportunities for growth within an existing client base
• Experience and/or designation in Scrum or other Agile project management methodologies is an asset
• Ability to work successfully with minimal supervision
• Knowledge of database management systems (SQL, Oracle), MS Office including MS Word, MS Excel, MS PowerPoint
• A demonstrated commitment to continued learning either through a structured education program or on the job learning
• Projects a credible executive image when strategically communicating and planning for change
• Fosters and manages productive relationships with executive level sponsors
• Guides staff in learning and applying useful decision-making approaches
